

**Home is
your castle,
why poison
the moat?**

Don't Pour it Out: Household wastes can poison the places you like to swim and fish. Follow directions on how to use a product, recycle what's leftover per local waste management procedures, and dispose of the container.

Inspect Your Septic System: Failing septic systems contribute to stormwater pollution. Regular inspections are critical.

Don't Feed Waterfowl: While ducks, geese, and swans love to eat the bread we offer them, it lacks the nutrition of their natural diet and has damaging impacts for local waters.

Wash at a Car Wash: Washing your car in your driveway may allow the soapy water and dirt from your car to quickly enter a stormdrain to local waters.
